### Zero Emission Vehicles (ZEV) Policy on Campus

Ski base provides winter and summer equipment for rent

In 2021 on the territory of SibFU's Campus electric station was launched in collaboration with Rosseti and Medved Holding Group.

The new electric filling station will not only serve to charge the electric vehicles of Krasnoyarsk residents, but will also be included in the educational process in the preparation of students studying in the transport direction.

*\*The Higher School of Automotive Service operates within the structure of the Polytechnic Institute, a joint project of the Siberian Federal University and Medved Holding Group of Companies. Its use as a teaching tool has become relevant in connection with the first enrollment of students who will study the technique and technology of electric transport in a separate block*

**Description:**By Zero-Emission Vehicles (ZEV) Policy, all academic buildings and dormitories of Siberian Federal University are equipped with bicycle parking lots. Also, inside the buildings, there are public electrical outlets for charging electric scooters and hoverboards. Three sites out five are connected by a network of pedestrian paths called the Students Boulevard suiting for travelling both on foot and by ZEV. The Boulevard is divided into two parts, i.e. pedestrian part with surface resistance to water absorption and a lane for ZEV.

Zero-Emission Vehicles (ZEV) Policy involves free ZEV rental services for students, postgraduates, and staff on campus. Bicycles in summer and ski and skates in winter are available for rent.
